sky[nav]pro™ - The 4-in-1 Solution for Private Pilots: Navigation App now Available for Free

Berlin. Dacher Systems is taking the next step: after a very successful launch phase of the world innovation **sky[nav]pro™** – a **4-in-1 solution offering all relevant flight information like current weather data, navigation, collision warnings as well as tracking** in one App **for the first time**, the navigation App is now also available for free download for Android tablets and Smartphones at the Play Store. “We are also already working on the **iOS version** which will be available at the Apple Store by the end of the year,” delights Tiberius Dacher, Managing Director at Dacher Systems. Currently, the following countries are available for navigation with comprehensive map material: Germany, Austria, Switzerland, France as well as Benelux. The App also gives users access to the **free online planning tool** allowing them to perform their flight planning online that they can then send direct to the App. Only value added services like in-flight weather, collision warning as well as tracking with an integrated SOS function plus monitoring come at a charge.

Furthermore, until spring 2017 sky[nav]pro™ will be offering a free pilot phase together with FuelMap, the App for general and business aviation pilots: this shows fuel prices at airports in Germany (later also in other countries) making savings possible in the field accounting for largest flight cost variables. And you can now test it for free: simply click on it in the Online-FLY planning portal at the relevant airfield – you will then see the entry on available fuel and prices in the info box.

The next few weeks will see the next phase for the Dacher team being completed: because from Q4/2016 the Hardware Box will be available for delivery. One-off costs for the box stand at Euro 699 plus Euro 49/month for the satellite communication. Those quick off the mark benefit doubly here: alongside being able to use a worldwide technology innovation Dacher Systems is offering the first five hours per month free as a special promotion. Which means the only thing missing is “Collision Avoidance” developed, amongst other things, together with FLARM Technologie, which will be presented in the first quarter of 2017. “This means we will have arrived,” said amateur pilot Dacher. “Because as soon as the App is also available in the iOS version, the system will be fully operational on all platforms!”

About SkyNavPro™:

SkyNavPro™ was developed by Dacher Systems GmbH. Dacher Systems was established in 2005 by CEO Tiberius Dacher as an IBM-based systems company and rapidly developed into a solutions provider for telematics and avionics. As a member of the European telematics company, Telematics PRO e.V., Dacher Systems is known for the creation and design of social mobility requirements. The sites in Berlin, Düsseldorf, Zurich and Kronstadt assist international corporations in the aerospace sector. The owner and CEO, Tiberius Dacher, is a keen private pilot.
